OR1097

TOYOTA HIACE SERIES HUB LOCK CONVERSION TO FREE-WHEEL HUB 43509-35030

OR1098

Function of Hub Lock:

Due to the front axle structure of 4WD vehicles, when driving in 2WD mode, the front half-shafts still rotate together, inadvertently increasing wear on the front axle components. Installing a hub lock forces a true 2WD conversion, ensuring only the wheels rotate during driving while the half-shafts remain stationary. This reduces wear and stress on the front axle assembly. During off-road driving, the ability to forcibly switch to 2WD when 4WD cannot be disengaged is critically important.

Advantages:

- Significantly reduces steering effort
- Minimizes wear and stress on front axle half-shafts
- Lowers fuel consumption (though marginally)
- Forcibly switches to 2WD when 4WD cannot be disengaged—vital in off-road scenarios.
